

**Clear Creek Conservation District is offering composters to promote
“green” energy and recycling efforts.**

SINGLE TUMBLING COMPOSTER

The Single Tumbling Composter is made from recycled food grade barrels and have traveled many thousands of miles. They have been thoroughly cleaned inside and out, and have had several coats of a UV polish applied. They may have some scratches and scrapes, which should be considered as part of the “character” of the recycled barrels.

The framework is made from 2 inch by 1/8 inch rolled steel, and has rounded edges so you can move it to different locations on your property without creating gouges and scrapes in your yard.

Why use black barrels? Black absorbs heat from the sun better than any other color, and as experienced composters know, the hotter the temperature of the contents, the faster the barrels will produce finished compost. The composters have a removable screw on lid. The composters have holes in both the top and the bottom, allowing rain water to enter the barrel and escape, after moistening the contents. The composters have a metal cross bar in the center of the barrel to break up the contents of the barrel each time it is turned. Put in your "greens and browns", give the barrels a spin and you will be well on your way to making your own compost, far better than money can buy.

Conditions of Sale—Composters must be used for recycling / conservation purposes. Payment must accompany order.

I have read and agree with the above “Conditions of Sale.” _____
